Homework Assignment #1
GUI and Command-line Paper

As someone with experience in web and graphic design I prefer the GUI interface. Being visually oriented means that this method of interacting with files and documents comes more natural to me. It's a good way to create a sense of organization within the group where the Command-Line is essentially a more functional search bar for what I normally use it for.

I don't have nearly as much experience with the command-line system but I do know that it's a great way to test and check code as well as search code directories. Overall I think I will be using the GUI interface as much as possible as it is the best way for me to create and organize file structures. It is also the primary way that Wordpress sites are organized so I will be sticking to that in order to gain more experience.
